INSTRUCTIONS TO EXPORTERS

Shipper's Export Declarations (Form 7525 of the Treasury Department) are the sole source of statistics of commodity exports from the United States. Many manufacturers and exporters have proclaimed the value of these statistics.

It is to the interest of all firms engaged in foreign trade to maintain the greatest possible degree of accuracy in the figures. The purpose of this pamphlet is to assist shippers of all kinds of iron, steel, and hardware products in the proper execution of export declarations, particularly in regard to the correct classification of articles exported.

The official schedule of commodities and regulations governing statistical returns of exports are to be found in the publication entitled "Statistical Classification of Domestic Commodities Exported from the United States (Schedule B)," effective January 1, 1931, which may be obtained from the Superintendent of Documents, Washington, D. C., or from any district office of the Bureau of Foreign and Domestic Commerce. The price is 20 cents. Every shipper should have a copy of Schedule B. The present glossary of commodities is intended for use in conjunction therewith, and applies particularly to Group 6, Sections A, B, C, D, and E, although some references are made to articles classified under other groups.

Shippers are urged to give careful consideration to the preparation of Shipper's Export Declarations, and not to delegate this work entirely to minor employees, who are likely to lack the necessary knowledge and discretion essential to the correct filling out of the form.

CLASSIFICATION

It is of vital importance to determine the proper class under which each item falls and to enter the numbers in the column headed "Statistical Code No., Schedule B." The alphabetical section of this glossary may be helpful in determining the classification of doubtful articles.

A tendency has been noticeable in the past to put under class No. 6209, "Other iron and steel manufactures," many items properly belonging under more specific classifications. Care should be exercised to ascertain whether there is not a definite class in which the commodity should be placed, before deciding to classify the article under class No. 6209. As an example, carpenters' bit braces fall under class No. 6169, "Mechanics' and other hand tools, n. e. s.," and not under class No. 6209.

Considerable discretion may be required in declaring certain iron and steel manufactures used as parts or accessories of automobiles, machinery, etc. If power-transmission chains, forgings, or similar articles are shipped for use as parts of automobiles or machinery, they should be declared under the appropriate number applying to automobile or machine parts. If, however, such items are shipped for general use, transmission chains, for example, should be placed under class No. 6191 and forgings under class No. 6109.

VALUATION

The value stated on the Shipper's Export Declaration should be the actual selling price (at the port of exit, not including ocean freight or marine insurance) if the goods are sold. If shipped on consignment, value should be given as the market value at the time of exportation at the port of the United States from which the merchandise is exported.

Quantities and values are to be given in whole numbers only, ignoring fractions less than one-half and counting one-half and over as a unit. When the unit of quantity is the ton, in all cases 2,240 pounds is meant. In such instances, if a quantity of less than 1,120 pounds is shipped, the quantity column is to be left blank. When the dozen is the unit and less than six articles are included in the item shipped leave the quantity column blank.

DESCRIPTION OF GOODS

Goods should be described in a concise yet accurate manner. Avoid vague and general terms, such as "steel products," "tools," etc.

COUNTRY OF DESTINATION

The country to which the merchandise is sold is the ultimate foreign destination of goods. Take special care to state the final destination of goods shipped through Canada to Europe and of goods to be transshipped in the United Kingdom, Hong Kong, Panama, etc., to other countries.

EXECUTION OF EXPORT DECLARATION FORM

Declarations should be typewritten or in ink; pencil is not permissible. Blank forms (Treasury Department Form No. 7525) may be obtained from any collector of Customs at 25 cents per block of 100.

Shipper's Export Declarations are confidential and their contents will not be divulged to outside parties.

A specimen export declaration, properly made out, appears on the back of title page.

CLASSIFICATION OF IRON, STEEL, AND HARDWARE PRODUCTS FOR EXPORT, ARRANGED BY GROUPS

[Extract from Schedule B, Statistical Classification of Domestic Commodities Exported from the United States, effective January 1, 1931]

Class No.	Commodity	Unit of quantity
	METALS AND MANUFACTURES, EXCEPT MACHINERY AND VEHICLES	
	IRON ORE	
6001	Iron ore	Ton.
	IRON AND STEEL SEMIMANUFACTURES	
6007	Pig iron	Ton.
6008	Iron and steel scrap (including tin-plate scrap)	Ton.
6014	Steel ingots, blooms, billets, slabs, and sheet bars	Ton.
	Iron and steel bars and rods:	
6021	Iron bars	Ton.
6023	Steel bars	Ton.
6025	Alloy steel bars	Ton.
6027	Wire rods	Ton.
	Iron and steel plates, sheets, skelp, and strips:	
6030	Boiler plate	Ton.
6031	Other plates, not fabricated (*Classes 6030 and 6031 include material ⅛ inch and over in thickness.*)	Ton.
6032	Skelp iron or steel. (*Consists of long strips used in the manufacture of pipes and tubes.*)	Ton.
	Iron and steel sheets, galvanized—	
6033	Iron sheets, galvanized	Lb.
6034	Steel sheets, galvanized	Lb.
6035	Steel sheets, black	Lb.
6036	Iron sheets, black (*Classes 6033, 6034, 6035, and 6036 include material under ⅛ inch in thickness.*)	Lb.
6037	Strip steel, cold rolled	Lb.
6038	Hoop, band, and scroll iron or steel	Lb.
6040	Tin plate, terneplate, and taggers' tin	Lb.
